                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                fibrosis, pulmonary hypertension, emphysema, chronic obstructive
c pulmonary disease (COPD), and cancers such as leukaemias, lymphomas,
c carcinomas, and cancers which may metastasise to the lungs, including
breast and prostate cancer. The reduction of the adenosine content of
the ONS reduces side effects. The A-containing ONS break down with the
release of deoxyadenosine which activates adenosine receptors causing
bronchoconstriction and inflammation. AAA32313 to AAA35312 represent the
nucleotide sequences given in the sequence listing from the present
invention, which correspond to SEQ ID NO:1 to 2815, but the sequences
differ from the previously named sequences. SEQ ID NO:11 to 1880
(AAA33233 to AAA3392) are specifically claimed ONS from the present
invention. N.B. Sequences given in the disclosure of the present
invention do not match up with their corresponding SEQ ID NO: sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Query Match 3.1

The ON can have antiinflammatory, antiallergic, and instabliantic, cytostatic and analgesic activities. The compositions are useful for the treatment of diseases associated with inflammation, impaired aliways, including lung diseases and diseases whose secondary effects afflict the lungs of a subject. They can be used for treating e.g. ischaemic conditions, pulmonary vasoconstriction, allergies, asthma, impeded respiration, respiratory distress syndrome, pain, cystic asthma, impeded respiration, respiratory distress syndrome, pain, cystic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Disclosure; Page 1310-1311; 1343pp; English

NO:169.

asthma;

The present invention describes low adenosine (A) content antisense oligonuclectides and compositions (I) comprising them: In the antisense oligonucleotides the A is replaced by a 'Universal' or alternative base. (I) can have respiratory, bronchodilator, antiinflammatory, analgesic,

  CC polymerase chain reaction (PCR) primers, oligomers, and for chromosome CC and gene mapping, and in recombinant production of (II). The CC polymerase chain reaction (PCR) primers, oligomers, and for chromosome CC polymucleotides are also used in diagnostics as expressed sequence tags CC for identifying expressed genes. (I) is useful in gene therapy techniques CC (II). (II) is useful for generating antibodies against it, detecting or CC (II). (II) is useful for generating antibodies against it, detecting or CC quantitating a polypeptide in tissue, as molecular weight markers and as CC a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating CC disorders involving aberrant protein expression or biological activity. CC The polypeptide and polynucleotide sequences have applications in CC diagnostics, forensics, gene mapping, identification of mutations CC responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and CC diagnostic coding sequences of the invention. CC diagnostic coding sequences of the invention. CC diagnostic coding sequences of the invention. CC diagnostic coding sequences of the invention. CC diagnostic coding sequences of the invention. CC are the sequence data for this patent did not appear in the printed confiction, but was obtained in electronic format directly from WIPO at figure in the printed confiction in the printed confiction in the printed confiction in the printed confiction in the printed confiction in the printed confiction in the printed confiction in the printed confiction in the printed confiction in the printed confiction in the printed confiction in the printed confiction in the printed confiction in the printed confiction in the printed confiction in the printed confiction in the printed confiction in the printed confiction in the printed confiction in the printed confiction in the printed confiction in the print
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Human; chromosome mapping; gene mapping; gene therapy; forensic;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Š
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     δÃ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences. AAS64197-AAS94564 represent novel human diagnostic coding sequences of the invention.

Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                1009

The invention relates to identifying a compound which binds to a Kinase CC (encoded by a nuclectide sequence of 1888, 403, 545, 361, 473, 3001, 526, 683 or 1448 base pair (bp) as given in the specification) comprising CC contacting the kinase with a test compound under suitable conditions for binding, and detecting binding of the compound to the kinase. CC The method is useful for identifying a compound which binds to the kinase. CC disorder characterised by aberrant kinase activity of the kinase. CC disorder characterised by aberrant kinase activity where the disorder includes cellular growth related disorders which includes a disorder, claim or a downregulation, of cellular growth, cellular growth CC deregulation or a downregulation, of cellular growth, cellular growth CC deregulation of cellular proliferation, cell cycle conditions callular differentiation and/or cellular hypertrophy, cc cardiovascular disorders such as heart failure, hypertension, atrial CC fibrillation, dilated cardiomyopathy, idiopathic cardiomyopathy, or candinal, proliferative disorders such as cancer (including melanoma, prostate cancer, cervical, breast, colon sarcoma). The kinases can antibodies raised against them are useful in one or more method composition as screening assays, predictive medicine and methods of treatment cand motopath (e.g. in gene therapy applications), to detect kinase and composition in a Kinase and phosphatase gene and to modulate kinase and phosphatase activity. The present can be composed to the composition of the composition of a composition of a composition of the composition of the composition of the composition of the composition of the composition of the composition of the composition of the composition of the composition of the composition of the composition of the composition of the composition of the composition of the composition of the composition of the composition of the composition of the composition of the composition of the composition of the composition of the composition of the composition o
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Identifying compound which binds to a Kinase, useful for treating diseases e.g. cancer, by contacting kinase with test compound and detecting its binding to the kinase {}^{\circ}
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Claim 1; Fig 10;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            (MILL-)

metastasis Nucleic acids encoding useful for preventing, preventing, human immune/hematopoietic diagnosing and/or treating cancers n polypeptides, and

Disclosure; CI DES NO 38919; 3071pp + Sequence Listing; English

cc amino acid sequences given in AAM82170 to AAM891921. (1) have cytostatic contivity, and can be used in gene therapy and vaccine production. (1) cc proteins and polynucleotides may be used in the prevention, diagnosis and ct treatment of diseases associated with inappropriate (1) expression. For ce example, they may be used to treat disorders associated with decreased complex they may be used to treat disorders associated with decreased complex they may be used to treat disorders associated with decreased complex the patients own production of (1). Additionally, (1) cc supplement the patients own production of (1). Additionally, (1) cc polynucleotides may be used to produce the secreted (1), by inserting complex the nucleic acids into a host cell and culturing the cell to express the complex and treat immune/haematopoietic-related diseases, especially concers and cancer metastases of haematopoietic antigen genomic concerns according to the present invention. AAK54921 to AAK87650 and AAM82169 concerns a con represent sequences ç AAK64702 used in encode the exemplification immune/haematopoietic antigen of the present invention E

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             13765
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          13525
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           polynucleotides may be used to produce the secreted (I), by inserting the nucleic acids into a host cell and culturing the cell to express the protein. (I) proteins and polynucleotides may be used to prevent, diagnose and treat immune/haematopoietic related diseases, especially cancers and cancer metastases of haematopoietic-derived cells. ARK64703 to AAK87694 represent human immune/haematopoietic antigen genomic sequences from the present invention. AAK84942 to AAK84950 and AAM82169 represent sequences used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                           1592
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        1292

AAK54951 to AAK64702 encode the human immune/haematopoietic antigen (I) amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic activity, and can be used in gene therapy and vaccine production. (I) proteins and polynucleotides may be used in the prevention, disgnosis and treatment of diseases associated with inappropriate (I) expression. For example, they may be used to treat disorders associated with decreased expression by rectifying mutations or deletions in a patient's genome that affect the activity of (I) by expressing inactive proteins or to supplement the patients own production of (I). Additionally, (I)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                     amino acid sequences given in AAM82170 to AAM91921. (1) have cytostatic activity, and can be used in gene therapy and vaccine production. (1) proteins and polynucleotides may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate (1) expression. For example, they may be used to treat disorders associated with decreased expression by rectifying mutations or deletions in a patient's genome that affect the activity of (1) by expressing inactive proteins or to supplement the patients own production of (1). Additionally, (1) polynucleotides may be used to produce the secreted (1), by inserting the nucleic acids into a host cell and culturing the cell to express the protein. (1) proteins and polynucleotides may be used to prevent, diagnose and treat immune/haematopoietic-related diseases, especially cancers and cancer metastases of haematopoietic-derived cells. AAK64703 to AAK87694 represent human immune/haematopoietic antigen genomic sequences from the present invention. AAK54912 to AAK54950 and AAM82169 carefresent sequences used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                      Query Match

AAK54951 to AAK64702 encode the human immune/haematopoletic antigen (I) amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic activity, and can be used in gene therapy and vaccine production. (I) proteins and polynucleotides may be used in the prevention, diagnosis ar treatment of diseases associated with inappropriate (I) expression. For example, they may be used to treat disorders associated with decreased expression by rectifying mutations or deletions in a patient's genome that affect the activity of (I) by expressing inactive proteins or to supplement the patients own production of (I). Additionally, (I) polynucleotides may be used to produce the secreted (I), by inserting the nucleic acids into a host cell and culturing the cell to express the

Claim 5; Page 192-194; 210pp; English.

affecting growth and development (e.g., arteriosclerosis, cirrhosis, hepatitis), cardiovascular disorder (e.g., hypertension, myocardial infarction, Goodpasture's syndrome), and a lipid disorder (e.g., fatty liver, Gaucher's disease, Niemann-Pick's disease, hypercholesterolaemia, compounds. Anti-PKIN antibody is useful in a diagnostic test for a condition or a disease associated with the expression of PKIN in a biological sample. A composition comprising PKIN or an agonist or antagonist of PKIN is useful for treating a disease or condition associated with decreased or increased expression of functional PKIN. FKIN is useful in a number of drug screening techniques and to analyse the proteome of a tissue or cell type. PKIN DNA is useful for creating knockin humanised animals or transgenic animals to model human diseases, and in somatic or germline gene therapy. The present sequence is human treating and preventing cancer, an immune system disorder (e.g., acquired immune deficiency syndrome (AIDS), Addison's disease, all asthma, atherosclerosis, multiple sclerosis, psoriasis), disorders nucleic acid sequences. PKIN and its DNA are useful for diagnosing, relates human kinases (PKIN) and their corresponding allergy,

The present sequence encodes a human protein kinase. The gene is located on chromosome 15. The kinase polypeptides are useful for diagnosing a disease or disorder selected from cancers (e.g. cancers of tissues and cancers of hematopoietic origin), immune-related diseases and disorders, cardiovascular disease, brain or neuronal-associated diseases (e.g. Alzheimer's disease, Parkinson's disease, multiple
                                                                                                                                                                                                                                               Nucleic acids capable of encoding human polypeptides having a kinase or kinase-like activity, useful for diagnosing a disease selected from cancers, cardiovascular disease and neuronal-associated discuses (e.g. Alzheimer's disease)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Homo
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           brain disease; neuronal disease; Alzheimer's disease; chromosome Parkinson's disease; multiple sclerosis; metabolic disorder; peripheral nervous system disease; amyotrophic lateral sclerosis; neuronal disease; amyotrophic lateral sclerosis;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       2485

AAS64197-AAS94564 represent novel human diagnostic coding sequences of the invention. Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence
                                                                                                        1165

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Š
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                밁
polypeptide (II) sequences. (1) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polymucleotides are also used in diagnostics as expressed sequence tays for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or treat disease states involving (II). (II) is useful for generating antihodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a rood supplement. (II) and its binding partners are useful for treating disorders involving abbrrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              1994
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       1921

AAD33692-AAD33736 represent cDNAs corresponding to 21 human secreted protein genes, and AAE21191-AAE21235 represent the proteins they encode. AAE21236-AAE212360 represent human secreted protein fragments. The genes and their corresponding secreted proteins are useful for preventing, treating or ameliorating medical conditions, e.g., by protein or gene therapy. Pathological conditions can be diagnosed by determining the amount of the new protein in a sample or by determining the presence of nutations in the new genes. Specific uses are described for each of the 21 genes, based on the tissues in which they are most highly expressed, and include developing products for the diagnosis or treatment of immune or autoimmune diseases e.g. AIDS (acquired immune deficiency syndrome), asthma, anaemia and rheumatoid arthritis, breast neoplasia
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Tourette syndrome; encephalitis; cytostatic; haemostatic; anaemia; mania antiinflammatory; ophthalmalogical; dermatological; immunostimulatory; immunosuppressive; antibacterial; inmunostimulatory; immunosuppressive; antibacterial; antipsoriatic; gene therapy; autoimmune disease; Huntington's disease; meningitis; demyelinating disease; peripheral neuropathy; congenital malformation; spinal cord injury; peripheral neuropathy; schaemia; perception; multiple sclerosis; infarction; haemorrhage; schizophrenia; dementia; depression; panic disorder; learning disability; ALS; feeding disorder; hyperproliferative disorder; sleep pattern; cardiovascular disorder; reproductive disorder; digestive system disorder; behavioural disorder;
                                                                                                                                                                                                                                                                                                                                                                                                     An isolated nucleic acid molecule (I) comprising \epsilon encodes a polypeptide useful in the diagnosis and disorders e.g. immune disorders -

CC AAD33692-AAD33736 represent cDNAs corresponding to 21 human secreted CC protein genes, and AAE21191-AAE21235 represent, the proteins they encode. CC AAE21236-AAE21280 represent human secreted protein fragments. The genes CC and their corresponding secreted proteins are useful for preventing, treating or ameliorating medical conditions, e.g., by protein or gene CC therapy. Pathological conditions can be diagnosed by determining the CC amount of the new protein in a sample or by determining the presence of CC amount of the new genes. Specific uses are described for each of the C1 genes, based on the tissues in which they are most highly expressed, and include developing products for the diagnosis or treatment of CC immune or autoimmune diseases e.g. AIDS (acquired immune deficiency CC syndrome) asthma, anaemia and rheumatoid arthiltis, breast neoplasia CC and breast cancer, neurological disease, Tourette syndrome. CC meningitis demyelinating disease, peripheral neuropathies, mephasia, CC neuropathies induced by neurotoxins, spinal cord injuries, toxic celetrosis, ischaemia and infarction, haemorrhages, schizophrenia, mania, dementia, depression, panic disorders in feeding, sleep patterns, balance cand perception, encephalitis, disorders in cardiovascular, neural/CC sensory, reproductive and digestive systems, behavioural disorders and CC secreted protein-encoding cDNA of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   WPI; 20
